

New York Tower

New York Tower

The New York series of wall-hung bioethanol fireplaces comprises the most popular models from decoflame® as they fit into every modern home and provide an impressive effect.

The New York Tower is the smallest model in this series. With its vertical layout, the Tower is well suited for smaller settings, as in kitchens or hung on a column. As all New York models, it is available in several different finishes and can be manufactured according to special requirements in colour and size. The Tower is ideal for creating a cosy atmosphere and works well as supplement to existing heating systems. This model is installed easily and comes with an adjustable burner.

Specifications

Materials:
Steel and stainless steel.

Finish:
Brushed, polished (mirror-finish) and powder-coated.

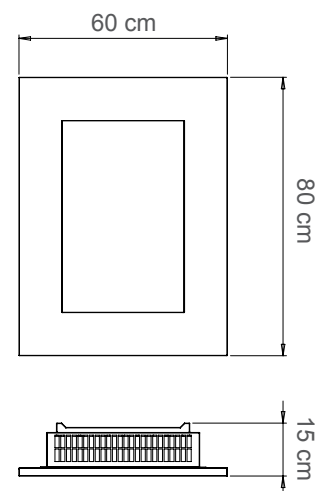

Heat efficiency:
Max. 2.2 kW

Burner volume:
2.4 litres of bioethanol. Use only bioethanol for decoflame® fireplaces.
